LIGHTNING PROTECTION SERVICES

UL Solutions Lightning Protection Certificate Services

Architects and Designers

Architects and designers around the world can help protect structural designs from physical damage and help reduce the likelihood of fire with the installation of lightning protection systems. As the only OSHA-accredited, nationally recognized testing agency offering Master Label® Certificate inspections for lightning protection systems, UL Solutions leverages more than 100 years of technical expertise to helping customers around the world. We have issued Master Label® Certificates on buildings such as the White House, Willis Tower and the U.S. Treasury Building.

Inspection standards

- UL 96A, the Standard for Safety Installation Requirements for Lightning Protection Systems
- NFPA 780
- Government/military specs
- IEC 62305 or AS/NZS 1768 IEC
- Other nationally recognized standards

Inspection documents

- Master Label® Certificate – indicates a fully compliant system
- Letter of findings – offered for limited scope or partial structure

Additional services

- UL Solutions learning and development – view our full training catalog for courses, dates and locations
